I developed a premium, conversion-centric eCommerce ecosystem for **SeneLeaf**, bringing West African herbal heritage to the global wellness market. The technical challenge was to balance heavy visual storytelling with lightweight code performance, creating a soulful digital experience that celebrates the ritual, purity, and cultural history of Senegalese botanicals.

Developer Highlights:

- **Intelligent Ritual Navigation:** Engineered custom, dynamic "Daily Ritual" engines (Tea Bag, Powder, Hot/Iced) to help users discover traditional teas based on their lifestyle.
- **Modular eCommerce Framework:** Built a scalable architecture using advanced CSS-grid layouts, allowing for easy inventory expansion without affecting site stability or speed.
- **Signature Recipe Hub:** Developed a specialized "Wellness Recipes" grid with filtered pairings, ensuring a frictionless path from product education to a confident purchase.
